## Instructions for the use of the Power Custom Frame and Slide Finishing Fixture

This finishing fixture has two main parts. One part is for the frame, and the other is for the slide. Position the frame fixture over the frame and slide on from the muzzle end. Tighten the set screw to lock fixture to frame. On the 1911 and clones, this will be into the disconnecter hole, and on the Browning High Power, it will lock on the barrel saddle of the frame. The slide finishing fixture holds the slide in much the same manner. This allows the frame and slide to be bead blasted, and/or sprayed with any desirable after market spray finish, and also allows the frame and slide to be hung in a curing oven if desired. Two 1/4-20 nuts are provided to enable the fixtures to be hung with a hook or wire.
